

***Google's
Duo and Allo Applications***

Video Calling & Smart Messaging

Duo - Video Calling

Most Video calling application use peer to peer software to make video calls via the internet.

Apple introduced FaceTime using excess bandwidth on the cellular system. Facetime requires a cellular phone number and the proprietary FaceTime software to be functional.

Google's Duo does the exact thing, it is not proprietary. The software is available for Android and Apple

Allo - Texting + Google's Intelligent Assistant

Allo comprises *Texting via your cellular service and Google's Intelligent Assistant via your data modem*

*Each can work independently or together. You can send and receive standard text messages **or** make inquiries and/or searches using the Intelligent Assistant.*

Working together : *The IA reads the content of the Text Message, suggest replays, updates to Calendars, Books Hotels, Airline Flights, Dining and many other features in Google Now or On Tap. Allo is available for both Android and Apple*
