

# Top 5 free extensions for Microsoft Edge

By Francis Navarro, Komando.com, December 2, 2016

With the release of the Windows 10 Anniversary Update in August, Microsoft finally rolled out extension support for its Edge browser, making it more competitive with products like Google Chrome and Mozilla Firefox.

Although the Microsoft Edge add-on selection is still not as varied nor as extensive as the other browsers, there are some pretty useful extensions that you can try now. Here are our top five free Microsoft Edge extensions:

## 1. Microsoft Translator

As the name of this extension suggests, Microsoft Translator translates foreign language websites to any of 50+ supported languages. Compatible websites will display the Microsoft Translator icon on the Edge address bar. Try selecting specific text and right-click to translate.

## 2. Amazon Assistant

This official Edge extension is a companion add-on that enhances the Amazon online shopping experience. Amazon Assistant gives Edge users nifty shortcuts to the Deal of the Day, Wish Lists, Product Comparisons and your other favorite Amazon departments. Having personal recommendations delivered straight to the add-on is a great feature for deal-hunters.

## 3. Mouse Gestures

Mouse Gestures is a cool Edge extension that lets you control the Edge browser with mouse movements. Just right-click and hold within a page then perform a preset gesture to perform browser actions like Back, Forward, Scroll Up, Scroll Down, etc. Try it! It's a fun and intuitive way to navigate around the Edge browser.

#### 4. Office Online

The image shows a card for the Office Online extension. On the left is the red Office Online logo. To its right, the text reads: "Office Online", "Developer: Microsoft Corporation", and "Price: Free ★★★★★". Below this is a screenshot of the Office Online web interface. The screenshot features a green header with the text "Create new Office documents". The main content area shows a browser window with a menu on the right listing "Word Online", "Excel Online", "PowerPoint Online", "OneNote Online", and "Sway Online". The browser window also displays a bicycle in a room and the text "The new Office. Takes the work out of working together". At the bottom of the screenshot, it says "Get started working online for free" and "View all apps".

Office Online is an official Microsoft Edge add-on that allows users to view, edit and create Office files right on the browser itself. It works with Word, PowerPoint, Excel, OneNote and Sway files and integrates with OneDrive cloud storage as well.

#### 5. LastPass

The image shows a card for the LastPass extension. On the left is the red LastPass logo. To its right, the text reads: "LastPass: Free Password Manager", "Developer: LastPass", and "Price: Free ★★★★★". Below this is a screenshot of the LastPass extension interface. The interface has a dark sidebar on the left with options like "Collapse", "Sites", "Secure Notes", "Form Fills", "Sharing Center", "Security Challenge", "Emergency Access", "Account Settings", and "More Options". The main area is titled "LastPass" and "search my vault". It shows a list of "Sites" with categories "Favorites (3)" and "Business & Productivity (7)". The sites listed include Fidelity, Outlook, Trello, Dropbox, Google, MailChimp, Moe, Pinterest, and Pocket. Each site card shows the logo and the email address "ton@lastpass.com".

LastPass is a cross-platform password manager that can generate and remember all your online passwords securely. With this extension, Microsoft Edge users could now finally integrate all their LastPass passwords with the browser.
