

## A Few of the Added Features in the Windows 10 Fall Creator Update

### **Storage sense**

Over time, your PC can quietly fill with needless junk without your even realizing it, as the Recycle Bin and temporary files suck up your storage. Storage Sense helps combat the creep. Head to *System > Storage* and enable the Storage Sense option to have Windows start automatically clearing out unneeded temporary files, and deleting any files in your Recycle Bin over 30 days old.

You can tweak those options using the *Change how we free up space* link underneath the option, but it doesn't do much in its debut state. Hopefully Microsoft will beef up this feature over time, making the settings even more useful in the future.

## Troubleshooting, troubleshoot

The Windows 10 Creators Update added a helpful touch for distressed PC users. The operating system's consolidated all of its troubleshooting tools in a single location: *Home > Update & Security > Troubleshoot*. If you run into trouble, run there first.

## Emoji

The Fall Creators Update *finally* dragged Windows 10 into the modern age with native emoji support. Yay! When you're inputting text, press *Windows Key + ;* (semi-colon) to summon the emoji keyboard. What took so long?
