

# Use AI to recreate a loved ones voice

By [Kim Komando](#), Komando.com, June 15, 2025

Is there any way to recreate grandpa's voice so my two young kids can hear him read their favorite bedtime stories?" Yes, you can absolutely do this with a little bit of AI magic and some tech know-how.

## 📁 Save and organize the audio

Start by pulling those voicemails off your phone.

- **iPhone:** Open the **Phone app**, tap **Voicemail**. Select the message and tap the **Share icon**. Save to **Files**, **Messages**, or **Email** it to yourself.
- **Android:** In your carrier's app, there is usually a way to save voicemails.

No save option?

🎙️ **Record with another phone.** Play the voicemail on speaker. Use a second phone with a free app like:

- [Easy Voice Recorder](#) (Android)
- [Voice Memos](#) (iPhone)

Once saved, keep those files backed up somewhere like [Google Drive](#) or [Dropbox](#), so they're ready for the next step.

## 🧼 Clean up the sound

Those recordings may need a little TLC.

- [Descript](#) – Transcribes and edits audio with a simple interface. You can even cut out background noise and stutters.

## 🗣️ Clone his voice

If you have at least a minute of clear speech, you can use AI voice tools to create a model of your dad's voice.

- [ElevenLabs](#) – Upload samples, and it'll generate a voice that sounds remarkably close.
- [Resemble.ai](#) – Another strong option that allows emotional tone customization.

Important: These tools are powerful, so use them thoughtfully and respectfully.

## 📖 Feed a story

Once you've cloned the voice, you can type in or paste the text of any story, even something you write yourself. The AI will read it out loud in your dad's voice. Imagine your kids hearing *Goodnight Moon* or *The Very Hungry Caterpillar* from Grandpa.

This is more than tech, it's creating an emotional time capsule. Your kids will grow up hearing their grandpa's voice, keeping his memory close in the most comforting way.
